

Feedback for current work:

Great work. I only have a few comments.

1. What does the “Notify subscriber failure” (figure 5 page 18/38) contain of text information?
2. The system tests are performed by the team as white box testing
3. The acceptance testing is performed by the end users as black box testing.
4. Those two test functions and non functions test cases are identical but the tester's knowledge of the code is different. If something is not working as expected then the expected source of error must be explained or even better fixed if the project time permits this.
5. The design illustrations are great

Meeting details:

Made a presentation of the current work including proof of concept and demonstration of the data flow between the device and the frontend (user view).

Action points:

1. Fix diagram to included failure details
2. Fix tests
3. Start working on the class diagram
